

# COURSE CHOICES

---

During the senior year, each student (with the advice of their Clinical Specialty Track director), will be encouraged to choose eight electives that have been determined to be appropriate for their field. Students are encouraged to take multiple sub-internship electives to better prepare themselves for entering residency. All students will take the Residency Preparation Course in April.

Each department has provided a list of electives. These electives have been determined to be appropriate for students entering that field. Modification of the elective list should be made ONLY with the advice of the CST director.
